

Reid's Heritage Homes - Educating the Building Industry and Homebuyers on the Future of Net Zero Energy

Click on the image above to view the complete video

Natural Resources Canada's ecoENERGY Innovative Initiative (NRCan ecoEII) received funding in Budget 2011 to support energy technology innovation to produce and use energy in a cleaner and more efficient way. As part of this initiative, NRCan contributed almost \$2 million to a national demonstration project to build Net Zero Energy Housing Communities in Ontario, Quebec, Nova Scotia, and Alberta.

Working with Owens Corning Canada and 5 leading builders - this project will see the construction of at least 25 net zero energy or net zero energy ready homes. The Net Zero Energy Homes are also participating in NRCan's 'R2000 Net Zero Energy Pilot' that is helping to set the standard for recognition of net zero energy homes in the marketplace.

Measured over a year, a Net Zero Energy Home consumes as much energy as it produces.

Reid's Heritage Homes was chosen to represent Guelph, Ontario.

On September 19, 2015, the first Net Zero Energy Home in Guelph opened its doors.
